Education

Bachelor of Technology (B.Tech) in Computer Science Engineering 2024 - 2028
Sapthagiri NPS University CGPA: 8.75

Projects

SignalForge - Multi-User Website & API Monitoring Platform Java 21 Spring Boot PostgreSQL Redis Docker
- Built and deployed a multi-user uptime monitoring platform using Java 21 and Spring Boot to run scheduled HTTP health checks and track availability, response time, status codes, and incidents.
- Implemented secure authentication with JWT, Google OAuth 2.0, email OTP, BCrypt, and Redis-backed sessions for independent multi-user access.
- Designed PostgreSQL/JPA data models with Flyway migrations and user-level data isolation; containerized with Docker and deployed on Render with managed PostgreSQL, Redis, and Brevo email.

AI News Notifier - AI Intelligence & Personalized Notification Platform React TypeScript FastAPI Python SQLAlchemy JWT
- Engineered a modular intelligence platform that ingests AI ecosystem data from 12 configured RSS, blog, and GitHub sources with persistence and deduplication.
- Built a multi-stage AI pipeline for cleaning, classification, entity/keyword extraction, summarization, enrichment, and relevance scoring to power personalized feeds.
- Developed REST APIs and React/TypeScript interfaces for authentication, onboarding, search, saved articles, notifications, profiles, and user preferences using repository/service-layer architecture.

StartupIQ - AI-Powered Startup Funding Intelligence Platform Flask PostgreSQL Machine Learning OAuth 2.0
- Developed a Flask + PostgreSQL startup analytics platform with ML-based funding prediction and recommendation systems.
- Implemented OAuth 2.0 authentication, analytics dashboards, secure session management, Render deployment, and scalable backend architecture.

CaseFlow AI - Intelligent Legal Reasoning & Case Analysis Platform RAG FAISS NLP JWT Flask
- Built an AI-powered legal analysis platform using RAG, FAISS vector search, NLP, JWT authentication, and multilingual support.
- Implemented semantic legal retrieval, contextual legal chat, explainable AI insights, and PDF/text processing pipelines.

Enterprise Medical Store Management System Flask MySQL CRUD Role-Based Access
- Developed a healthcare inventory and billing platform with role-based authentication, analytics dashboards, and DBMS-driven CRUD workflows.
- Implemented inventory tracking, billing automation, low-stock alerts, expiry monitoring, and relational database management.

Technical Skills

Languages: Java, Python, SQL, C, JavaScript
Backend & APIs: Spring Boot, Flask, FastAPI, REST APIs, JPA/Hibernate, SQLAlchemy, Flask Blueprints
Security & Auth: Spring Security, JWT, OAuth 2.0, BCrypt, Email OTP, Authentication & Authorization
Databases & Caching: PostgreSQL, MySQL, SQLite, Redis, CRUD, Relational Database Design, Flyway
AI / ML: Scikit-learn, TensorFlow, Pandas, NumPy, NLP, Random Forest, TF-IDF, RAG, FAISS
Frontend & Tools: React, TypeScript, HTML5, CSS3, Git, GitHub, Docker, Render, Railway, Gunicorn, Firebase

Courses & Certifications

- Chanakya University 48-Hour National Hackathon Participation
- Build for Bengaluru Hackathon (Google Developer Group, Reva University) - 30-Hour Hackathon
- Dayananda Sagar University 24-Hour Hackathon Participation
- Python Basics - UiAthena (Cambridge International Qualification)
- Python using AI - Skillected
- HTML & CSS Bootcamp - LetsUpgrade
- Zetronica Coding and Debugging Competition Participation
- TechGyan Artificial Intelligence Workshop Participation
